Ultrasound-guided biopsy is the accepted method for percutaneous liver biopsy, but is painful, cumbersome and technically difficult. This study evaluates a new method for ultrasound-guided biopsy. Eighty-four patients were randomized into three groups. Group 1 (n = 29) had a skin puncture done using a biopsy cannula under ultrasound guidance, followed by the placement of a skin incision under ultrasound guidance. Group 2 (n = 29) underwent the same technique, but the puncture was performed using a sharp biopsy needle, while group 3 (n = 20) had a sharp biopsy needle inserted under ultrasound guidance alone. Adequate samples (i.e. >2 mm) were obtained in 77% in the cannula group, in 81% of the needle group and in 90% of the needle group. There was no statistical difference between the needle and cannula groups in terms of the proportion of adequate specimens obtained (p = 0.5). The percentage of samples positive for malignancy in the biopsy needle group was significantly lower than the positive proportion in the biopsy cannula and no needle groups. Ultrasound guidance does not add significantly to biopsy needle puncture. Gene therapy for pulmonary hypertension. Pulmonary hypertension (PH) is a pulmonary vascular disorder characterized by elevated pulmonary arterial pressure (PAP) and associated vascular changes, leading to premature death. The principal cause of PH is based on abnormalities in the function of the vascular endothelium and blood vessel remodeling, but the exact mechanisms remain unclear. Treatments of PH can be divided into p
