Adobe Illustrator is a vector graphics application used to create, edit, and lay out illustrations. You create vector shapes and use Illustrator's features to manipulate them. A vector image does not lose any quality when scaled up or down. Illustrator is the application for magazines, posters, and corporate identity work as well as logos and clip art. You can create a wide variety of artwork. You can create logos, posters, illustrations, cartoons, and more. Illustrator has its own dedicated website at www.adobe.com/design. The program includes tools to manage shapes, draw paths, manipulate paths, edit text, create guides, and more. The program also features an online tutorials section on the website.

Adobe Photoshop Elements is a powerful editing and retouching software in order to reduce images from scratch or enhance digital images (i.e. web design, icons and logos, posters, JPEGs, PSDs, black & white photos). Adobe Photoshop Elements also contains many features for business and web design, as well as the ability to create tutorials.

Adobe Photoshop Elements 13 Features Unlimited Elements The included basic version of Photoshop or Elements suite is only limited by your imagination - in theory, you can create the ultimate images in it.

Alchemy 5 for Elements Adobe's in-house animation and effects engine allows you to create beautiful effects that you can use in all Adobe applications, and not just in Elements.

Advanced Retouching 1 A professional-level retouching tool that's powerful enough for any level of users.

Advanced Retouching 2 It improves the performance of advanced retouching, allowing you to edit larger canvases than in the previous version.

Active Layers To edit multiple layers of an image simultaneously, create a new one or merge existing layers, and then you can use the "active layers" to edit each layer separately.

Color Range Picker The Color Range Picker is a quick and easy way to see the color ranges of a layer or a palette of colors at once. Colors, Grayscale, and Luminance You have two choices: Grayscale and Luminance. Grayscale lets you work on your images as though they were photographs, but without color saturation, while Luminance lets you work on images as though they were JPEGs.

Color Splash This feature allows you to splash colors onto selected areas of a layer, creating images that look like some flower was dropped on it.

Curves This tool allows you to adjust the brightness/darkness, contrast, and gamma.

Destination Brush To create a brush that you can use in several images

in one go, use the destination brush. Duplicate Layers The Duplicate Layers function lets you clone an image and/or layer; you can drag the layer to a different location within the image. Exposure Compensation This tool lets you easily change the amount of shadows and highlights in an image. File Type Replacement This 388ed7b0c7

Introduction {#S1} ===== Fractures of the tibial tuberosity are rare injuries in children.^[@R1]--[@R3]^ Typically they are managed conservatively, but there are no formal studies to guide surgical management.^[@R2]^ We present an unusual case of a vertical fracture of the tibial tuberosity in an eleven year old girl who was treated successfully with plate fixation. Case report {#S2} ===== An eleven year old girl presented with an acute grade 3 open spiral fracture of the left tibial tuberosity ([Figure 1](#F1){ref-type="fig"}) following a motor vehicle accident. She had a 4 x 3 cm wound with exposed bone. She was taken to theatre on the day of injury for wound debridement and irrigation, and skeletal traction. The patient developed a wound breakdown at the site of traction pin removal on post operative day 4. The wound was thoroughly debrided and examined. The bone ends were well apposed and there were no signs of infection. No viable bone was seen on the initial radiograph ([Figure 2](#F2){ref-type="fig"}). Figure 1Open spiral fracture of the left tibial tuberosity, just distal to the joint line. Figure 2Radiograph of the left knee. There is good callus on the fracture site. The patient had an excellent response to intravenous antibiotics with a wound swab negative for infection at presentation. She was re-explored at this stage to find fibular and popliteal vessels for arterial reconstruction. A 1 cm length of the left peroneal artery was transected and an arteriovenous fistula was created. This was used as a conduit for the femoral artery as the proximal stump of the tibial artery was too short. The two ends of the tibial fracture were well apposed and there were no significant bone fragments. Plate fixation and skin grafting were performed using the standard extensor mechanism approach. The plate was fixed with three 4.0 mm V-LOCK screws placed in a divergent fashion over the inferior tuberosity fragment ([Figure 3](#F3){ref-type="fig"}). A non-absorbable suture was placed in the cannula through the aponeurosis to facilitate future anterior cruciate ligament reconstruction.

Our recent research on the rat arcuate nucleus has led to the identification of its role as a major site of prolactin synthesis. This, together with the identification of the rat mammary prostaglandin synthetase as prolactin, establishes the arcuate nucleus as a highly restricted site of synthesis of a major plasma protein. In this proposal, we plan to take advantage of the recent ability to study the synthesis of

specific proteins in vitro. In so doing we will take advantage of our present knowledge of the in vitro synthesis of the "normal" prolactin and the lactogen for sheep cells in which prolactin synthesis has been destroyed by drugs, to further explore the regulation of the cellular levels of these peptides. We will also take advantage of the recent isolation of the rat prolactin receptor, to study its specific binding characteristics in relation to the levels of receptors bound in the arcuate nucleus of rat pituitary. Finally, we have found that prolactin synthesis is stimulated in human prolactin secreting pituitary tumors. Further studies on the stimulation of prolactin synthesis in these tumors will be undertaken.

You are here CADBI's Housing Finance for Alternatives On January 4, 2012, CADBI's Housing Finance for Alternatives, or CHFA, will celebrate its 3rd anniversary with over 200 individuals from various sectors of the housing finance market and academia in attendance to discuss the future directions of U.S. housing finance. CHFA is a nonprofit formed by a group of housing finance stakeholders to bring participants together to share views on the industry's future.
