Users work by manipulating three-dimensional objects and annotating them with text, dimensions, lines, and hatch fills. Some users, particularly those working on very large drawings, may work with several different views of the same model. To work efficiently, the user needs to be able to toggle back and forth between these views. In addition, AutoCAD can simulate cutting and welding operations that are designed to replicate reality, to allow the user to test and edit geometry before actually creating the real thing. AutoCAD also includes modeling, rendering, and animation features. AutoCAD can produce graphics, Web-based output, and print-ready files. The major use of this program is to design structural and civil engineering projects. The industry value of the 2017 annual revenues was \$3,151.84 million. The yearly list price of AutoCAD is \$3,995.00 for the basic version and \$4,395.00 for the professional version. You can download the trial version of AutoCAD through the Windows Store. 1. **Bridge Assistant** The Bridge Assistant lets the user annotate and work with another drawing while maintaining the connection between them. For example, you can view a section of the drawing with the feature. Then you can annotate the drawing by selecting and drawing on the elements of the model in the section. If you like this feature, then you may want to use the Bridge Assistant to annotate other drawings. Note that a Bridge Assistant drawing is not a copy of the other drawing. The drawing you are annotating is not deleted when you are done. In fact, when you are done, you may choose to just ignore the annotation and not delete the feature. The Bridge Assistant is available for AutoCAD LT.

Q: How can I find "suitable" books in each grade? Background I am an introductory math teacher in the UK and this week I am expected to send a letter to parents explaining the homework for a particular year level. The school publishes a (very difficult to navigate) Parent newsletter and an (less difficult to navigate) Parents' Council booklet. The Parents' newsletter is available in pdf and I have been using it for the past few years to send letters home but I have found it quite difficult to fit all my maths teaching into a single letter. I can't use a whole page for a maths lesson because the newsletter is so long. I would like to do more with it, so I am looking for ways to make it more useful to the parents. Here's where I'm stuck The Parents' Council booklet is a great resource but they only cover a few grade levels. I would like to find out about suitable books for other grade levels, so I don't waste the Parents' Council booklet sending them home. The Parents' newsletter has lots of good recommendations for books. The problem is they are aimed at pupils, rather than parents. For example: "The advice and information in the "Getting ready" section of "Getting maths home" should be helpful to you as a parent. Not only will this help you understand what mathematics is being covered in the school curriculum, but also it will help your children find some support from outside the classroom to deal with problems in their

**Precision surfaces:** Precision surfaces support an enhanced approach to smooth surface construction, helping you create surfaces that exactly match your geometry. Users can speed up surface construction time by using the preferred method on the Precision Surface menu to match the surface that you're creating, or by using the Apply surface to selected feature command (pivot, move, or copy) to specify a preferred surface from the surface library. In the surface library, surface types include mirror, friction, shear, and translation surfaces, and each can be created as a continuous, spline, or disc surface.

**Advanced Shear:** Advanced Shear now allows you to increase the resolution of shear surfaces.

**Smooth welds:** Smooth welds now support an enhanced approach to solid fill on welds and seams to improve surface detail. In the surface library, weld surfaces are all smooth surfaces and can be created as continuous, spline, or disc surfaces.

**Slip surfaces:** Slip surfaces now support a new streamlined approach to making slip surfaces and to specifying slip surfaces, which supports closed surfaces and slip surfaces.

**User-defined align surfaces**
