In 2014, more than 180 million AutoCAD users world wide were estimated to use this software as the industry's leading product. History AutoCAD is a commercial CAD software application developed and marketed by Autodesk. Autodesk acquired Desk Designer and DeskSketch in 1996, and began to distribute AutoCAD as a subscription-based service in 1997. In November 1998, Autodesk acquired Bitstream and continued to distribute the free AutoCAD LT as a freeware application. AutoCAD first appeared in 1982, running on the MIT-licensed MIT Image Computer, with a display area of 1.5 inches by 1.5 inches (3.8 cm by 3.8 cm). A year later, its license was expanded to allow it to run on the Magnavox Odyssey². A year later, AutoCAD was ported to the Magnavox Odyssey² II. In 1984, a port was made to the TI 99/4A, and in 1985 a version with extended capabilities was released for the TRS-80 Model I. In 1985, an expanded version of AutoCAD was ported to the DEC PDP-11 computer, running on the PDP-11/70A. In 1986, the PDP-11 version was ported to the DEC PDP-11/23. In 1987, the PDP-11 version was ported to the IBM PC, running on the PC/AT. In 1988, the first version to run on Unix was released. In 1990, the Macintosh port was released. By the end of 1991, a version for OS/2 was released. A version for Windows was also released in 1991. In 1992, the DOS port was released. In 1992, AutoCAD was ported to the Macintosh again, and another version for Windows was also released. In 1993, a version for the OS/2 Warp Operating System was released. In 1994, the IBM OS/2 port was released. In 1995, the Windows port was released. In 1996, the first port of AutoCAD to the Linux platform was released. In 1997, the OS/2 port was released. In 1998, the port to OS X was released. In 2010, the iWork '09 suite was released as a bundle with OS X, and is bundled with the OS X Lion, Mountain Lion, Mavericks, Yosemite, and El Capitan versions of Mac OS X. In 2016, AutoCAD AutoUpdate was added

BIM Exchange In 2011, Autodesk acquired a new BIM Exchange platform for a number of their products which allows users to access building information models. The platform features Autodesk BIM Exchange Document and Autodesk BIM

Exchange Database and Autodesk BIM Exchange Services. In July 2011 Autodesk bought Castillion Software, creator of the Starling Building Information Management System (BIM) platform. In 2012 Autodesk acquired the intellectual property related to Starling, the BIM Exchange service of Castillion Software, and renamed Autodesk Starling. In May 2014 Autodesk announced that they would be integrating Starling into AutoCAD Architecture. In 2017, Autodesk released A360 technology to access, manipulate and display a large number of building information models (BIM) in any of their applications. A360 is a BIM-compatible cloud-based platform for architects, engineers and construction teams.

Autodesk ReCap platform The Autodesk ReCap platform consists of software tools and services that allow users to create sophisticated and accurate, automated building models using 3D data. Autodesk ReCap integrates all Autodesk products and 3D models, and allows users to manage and modify data throughout a project. Autodesk ReCap uses the topology of 3D models, and combines 3D technology with construction documentation to create a single, comprehensive project management tool. eMorph, Autodesk's digital construction technology, is integrated into Autodesk ReCap. eMorph is an Internet-based 3D content creation platform that is also available as a standalone software application. Autodesk ReCap uses eMorph technology to automatically convert 2D drawings into 3D models, to animate models and to streamline collaboration.

History In early 2004, Autodesk ReCap was demonstrated at the CAD and CAM Europe Expo as an early product that incorporated Digital Projection Modeling (DPM) technology. This was the first time DPM was demonstrated to the public as a 3D Building Information Modeling (BIM) product. This technology was acquired by Autodesk from Digital Projection Corp. (DPC) and renamed to eMorph. Autodesk added the ReCap platform to their product portfolio in 2004. eMorph is a collaborative application that allows teams to create 3D models of buildings and to collaborate on them through CAD applications and the internet. It allows teams ca3bfb1094

What's New In?

The Markup Assistant allows you to quickly annotate a paper drawing and automatically incorporate the annotations into your document as if you were manually typing them. (video: 1:27 min.) Markup Assist can import annotations or even drawings created with DWG2CAD, CAD2DWG, and other drawing software. Model sheets, which include comments and notes about the model, will automatically create a model sheet. And you can manage changes and comments for specific drawing sets to ensure you're always working on the latest drawing. Linked Files: Enter the information you need into one file, and your data will show up in all your drawings. We call this feature Linked Files. You can share a file with your team, and they can also link it to files stored in the cloud. You can create a single version of a drawing and use it in multiple applications. Data-Typing: Use your keyboard as a virtual function keypad to quickly type in parameters or comments. Data-Typing lets you use a keyboard that's already on your computer, so you don't need to remove or reattach a USB keyboard. When you type, the command line automatically pops up with its description and other available options. If a command isn't available, you can automatically save the command and display it in the command pallet. Windows App Frame: The new, built-in Windows App Frame allows you to create an app that runs as a standalone application on Windows. You can use the App Frame to create 2D views that run as standalone applications. The new Mac App Frame allows you to create a Mac app that runs as a standalone application on Mac. Icons: The Sketch Tester tool now shows an icon in the task bar to indicate that it's running. When it's finished, it closes the window. The New Command Bar: The New Command Bar was redesigned to provide you with more information on what the command does. Show me the command description Automatically open the command reference Show me the command tooltip Show me the shortcut key description Show me the command pallet Redesigned Version Numbers: The drawing version number is now always visible on the bottom right of the drawing screen. The drawing is frozen while you update the version number. Fixed
