The silicone rubber compositions employed for the medical device applications described above are usually composed of highly purified siloxane polymers having very low content of volatiles such as volatile silicone oils. The term "volatile" as used herein means organic solvents having boiling points of from 50.degree. C. to 300.degree. C., especially hydrocarbon or halogenated hydrocarbon compounds. For example, the term includes any of the volatile silicone oils listed in OSHA Hygienic Standard 29. In order to provide highly purified silicone polymers having reduced amount of volatile materials, various synthetic approaches have been proposed. One of the most promising approaches is to increase the reactivity of hydrosilylation of hydroxyl-terminated polydiorganosiloxanes to cross-link and thereby suppress the generation of volatile materials. For instance, U.S. Pat. Nos. 4,311,706, 4,254,207, and 3,926,900 have disclosed silicone rubber compositions having improved biocompatibility by reacting a polysiloxane which is synthesized by hydrosilylating a particular type of hydroxyl-terminated polydiorganosiloxane to have a low boiling point with a platinum-containing catalyst in the presence of a silanol condensing agent and a hydrosilylation catalyst. Also, U.S. Pat. No. 4,394,489 has disclosed a hydrosilylation method to cross-link the polysiloxanes at room temperature to produce high molecular weight polysiloxanes by reacting polysiloxanes with low boiling-point siloxane compounds in the presence of a hydrosilylation catalyst. U.S. Pat. No. 4,503,210 also has disclosed that silicone rubber compositions having reduced content of volatile materials can be produced by reacting a hydroxyl-terminated polydiorganosiloxane and a low boiling-point siloxane in the presence of a platinum-containing catalyst with a specified amount of a

hydrosilylation catalyst. Further, Japanese Patent ca3bfb1094

Plot Lucille Adams is a successful astrologer who uses her profession to further a romance between two men, one of whom is her lover, Reed Adams. Meanwhile, the star of a popular television show, Adam Dyson, has committed suicide, and his family hires Lucille to help them come to terms with the loss. Adam's life comes to a tragic end in an accident, but Lucille does not reveal to Reed the details of what has happened because she fears she will lose him. Her need to know more causes her to delve deeper into the stars than she should, and after that, she becomes hopelessly obsessed with the stars and the mystery of what they really represent. Lucille begins to make signs to the stars, sending her mother to check on the pregnancy, but when she eventually realizes that her child will be born prematurely, she realizes that what she has been doing is not right. Lucille begins to have nightmares in which she sees the figure of a man in a dark figure, but she knows that she should be afraid of him. When her mother dies, Lucille is left alone and after a failed effort to move, she relocates to a new home. She believes that she is pregnant again, although this time, the baby is male. The astrologer visits an oracle, who predicts that the baby will be a genius. Lucille gives birth to her son, who she names "Rex", and she gives up her career. She tries to make a new start in life. Lucille talks with a fortune teller who tells her that she should use her special gifts for a higher cause. The fortune teller tells her that a man who
