AutoCAD and AutoCAD LT (Formerly called AutoCAD 2000) are both aimed at architects and engineers. However, AutoCAD LT is offered as an entry-level version of AutoCAD. The AutoCAD LT package consists of AutoCAD, and these are usually bundled together as "AutoCAD LT/e" for ease of use. The two AutoCAD versions are different in a number of ways: the LT version is generally intended for use by students and beginners, and the LT/e version is more complex and geared towards users with experience. Autodesk offers two versions of AutoCAD for on-site use: AutoCAD LT and AutoCAD LT/e. If your business is big enough, you may need to pay for the enterprise package for AutoCAD LT/e, which includes the on-site license (meaning it can be used anywhere on the same computer where the version of AutoCAD on the license is installed) plus a license for use by the entire business. A licensed user of AutoCAD can work only in certain places, including some of the files and folders marked with a "C:" symbol. If you are licensed for the desktop version of AutoCAD, you can use it at your own discretion anywhere, including a networked location. If you are licensed for the LT/e version of AutoCAD, you can use it only in certain places marked with a "L:" symbol, including your personal desktop and several folders on the network drive that is shared with the rest of your company. You can pay for Autodesk licenses in the manner described below: Autodesk offers four license types. Their explanation is below. For both AutoCAD LT and AutoCAD LT/e, Autodesk offers only four license types. Their respective definitions are given below. When licensing a product, the vendor or distributor will prepare one of these four types of licenses, along with some required information about the license holder. This information is sent to your company or organization by Autodesk, and is kept in an electronic "key" on your company's computers. A "Physical" license is the one that is used to license a product physically, such as on an AutoCAD. Once the product has been delivered to your company, you will receive a Physical license with your serial number on it. A "Cloud" license is a license

the g-code programming language, which is part of DGN. DXF is used in the creation of g-code. History AutoCAD was first announced on May 23, 1982, at the AutoCAD Users Group (AUG) spring meeting in Los Angeles. Software engineer Doug Wallace and graphic designer Rudy Tanzi (who had just resigned from Colossal Cave Adventure in 1978) announced the new product at the AUG meeting, and announced that it would be a real-time 3D modeling program, which at the time represented an alternative to Computer Aided Design (CAD). AutoCAD was first released on January 18, 1983, to a very small, limited beta-release group of customers in Systems Research and Development (SRD) who had registered to be among the first to use the new program. In October 1983, AutoCAD became generally available to CAD users. See also References Further reading a1d647c40b
