Like its predecessor AutoLISP, AutoCAD is a programming language that allows users to create macros, functions, and other code to automate repetitive tasks. The language has been upgraded over the years, but remains essentially similar to AutoLISP. Many users use the language to develop custom workflows and macros. AutoCAD is one of a number of Autodesk design tools, along with AutoCAD R14, AutoCAD Architecture, and the former AutoCAD MEP. It is a graphics-oriented app that is usually paired with a geometric modeling package like AutoCAD LT or

---

AutoCAD MEP or a computer-aided manufacturing (CAM) package. It has been released as a web application for Microsoft Office 365 since 2010. It is one of the most popular CAD apps used in the architecture, civil engineering, and mechanical engineering fields.

### History and Functionality AutoCAD

was first introduced in 1982 as a desktop app for MS-DOS computers and ran on Motorola 68000 or Zilog Z80 chips. There were two editions of AutoCAD in 1982: the original, which supported only the 68000 processor, and the later M68000 version that supported the 68000 and the Motorola 68881. AutoCAD evolved from AutoLISP, an AutoLISP-based

---

program released in 1981. AutoLISP was developed by computer programmer Scott Franzblau of Zilog Inc. to help automate drafting tasks. It was one of the first CAD programs to be based on a programming language. Although AutoLISP did not have a built-in graphics interface, it could be used to program macros to manipulate 2D graphics. AutoLISP was created to allow programmers to write macros that could be saved and run at another time, just like a "macro" that exists today in Microsoft Excel. AutoCAD evolved from AutoLISP. Autodesk bought Zilog in late 1982 and started developing the first version of AutoCAD. AutoLISP was integrated into

---

AutoCAD and it became the default programming language. It was the first CAD program to have a graphical user interface (GUI) that allowed users to design and manipulate objects on screen. AutoCAD was later released as a stand-alone product, as well as a multiplatform app, for MS-DOS, the Macintosh, and Microsoft Windows. AutoCAD is one

Key LT for Windows 2000/XP/2003/2008, and AutoCAD for Linux. AutoCAD LT is a license-free, smaller model of AutoCAD with fewer features. Software development AutoCAD was originally written in the AutoLISP dialect of the LISP programming language, which became the base for the development of the version 2 and later versions of the software. When AutoLISP was no longer used, C++ was introduced as a new development language, and many features of the software were developed in a derivative of AutoCAD's own C++ Class Library (AutoCAD API). In 1998, the second major development language, Visual LISP, was

---

introduced, which was based on the Visual Basic programming language. AutoCAD also supported Visual LISP for a time. In 2004, Microsoft released a development language called Visual Studio. AutoCAD developers used this language as a basis for creating modules that could be used by the AutoCAD Engine to automate the process of creating drawings (Function modules). Visual Studio is also used to develop plug-ins and add-ons for the AutoCAD software. AutoCAD developers have been creating and releasing their own products to extend the functionality of AutoCAD as well as writing new AutoCAD functionality. The first of these was called

VISUASTUDIO, and was released to automate construction of architectural drawings using parametric 3D models. In 2005, the public beta version of VISUASTUDIO 3D was released. In 2007, VISUASTUDIO 2D was released and in 2009 the public beta of VISUASTUDIO 3D was released for the second time. VISUASTUDIO 3D was a complete replacement for the older VISUASTUDIO and was the first to feature an external installer (thus a one-time install, no need for maintenance). VISUASTUDIO 3D added the ability to edit and view model properties of exported drawings. VISUASTUDIO was published by AutoCAD

With Markup Import and Markup Assist, you can import and evaluate feedback about a drawing from a variety of sources, including paper or electronic. You can apply comments and edits to your drawing without having to open a separate drawing session or perform additional steps. No experience is required. You can import comments and reviews from paper and electronic documents such as printed PDFs and webpages. You can use the

---

comments and reviews as well as the markup tools to make updates to the current drawing. It's easy to use. Simply select Markup Import and Markup Assist from the Automate tab and follow the on-screen instructions to import comments. Review the imported comments and updates and click Approve to make the changes in your drawing. You can use Markup Import and Markup Assist to add comments, reject feedback, and make changes to the current drawing. New in AutoCAD 2023: When used with AutoCAD or AutoCAD LT, Markup Import and Markup Assist provides feedback about the validity of the feedback you receive. The tools offer different types of

---

feedback: Reject: Rejects the feedback. Use this feedback option to reject feedback that is invalid, redundant, or not applicable to your drawing. Apply: Performs an action based on the feedback. Use this feedback option to apply feedback that is valid, redundant, or applicable to your drawing. Approve: Accepts the feedback. Use this feedback option to accept all or most of the feedback. Design your future with AutoCAD 2023. New in AutoCAD LT 2023: Markup Assist supports the following new features in AutoCAD LT 2023: Use Markup Assist in the client presentation mode to evaluate and improve user interface designs. Reject a field in a

record or page in paper or PDF format and send an email to the reviewer or sender with the rejection. Use Markup Assist to view and edit records and pages of paper or PDF format from a predefined folder. Use the Markup Assist client as a simple PDF viewer to check the contents of a paper or PDF document before opening the document in a drawing. New in A360: The ability to upload completed drawings for others to view and comment on. The ability to upload comments, enable/disable, and reject feedback on completed drawings.
