Q: How to verify the response of a REST service in RSpec? Is there a way in RSpec to verify the response of a REST service? Let's say the REST service I am testing returns a status code of 200, but the payload is empty. describe 'GET', #show' do context 'with a valid response' do let(:query\_params) { { q: 'foo' } } let(:expected\_status\_code) { 200 } let(:expected\_body) { '' } it 'returns a 200' do allow(controller).to receive(:find\_async).and\_return(expected\_body) allow(controller).to receive(:get).with(query\_params).and\_return(expected\_body) get '/api/v1/foos' expect(response.status).to eq(expected\_status\_code) end end context 'with an invalid response' do let(:query\_params) { { q: 'foo' } } let(:expected\_status\_code) { 404 } it 'returns a 404' do allow(controller).to receive(:find\_async).and\_return(nil) allow(controller).to receive(:get).with(query\_params).and\_return(nil) get '/api/v1/foos' expect(response.status).to eq(expected\_status\_code) end end I'm aware of the include\_expectations! method, which enables RSpec to raise the appropriate error when a test does not pass. ## What's New in the AutoCAD?

Drawing Enhancements: Import digitized camera images and annotate to design more dynamically with the right information. See how these annotations are incorporated into your design. (video: 2:05 min.) Additional AutoCAD modeling features: Model and place regular, 3D, and intelligent components in your drawings. Control the fit of parts and assemblies using predefined ranges of tolerance, including the ability to create 3D parts in your drawings and to place assembled parts on a common reference plane. Accessorize your designs with advanced 2D and 3D annotation. Make tooltips and comment boxes to add annotations. Use the Shape Filter tool to search for shapes or place digital annotations on a drawing surface. (video: 1:33 min.) Use more data in your models. Take advantage of the powerful Workgroup Data Engine, which enables you to apply commands to any individual element, object, group of objects, or even the whole drawing. (video: 1:18 min.) Comprehensive features for creating and editing 2D and 3D models: Use the Model toolbar or the model tools in the main drawing area to add and edit models directly from a drawing. You can add or move geometry with specific commands for 2D or 3D models, and you can edit properties of 2D or 3D objects. Use parametric solids and a powerful 3D builder to quickly and easily create 3D parts with complex internal geometric features. Add 3D modeling features to drawings. You can create and modify 3D models in separate drawings, and the models are automatically incorporated into your design. (video: 1:39 min.) Share your designs more easily. Make models available to other AutoCAD users through distributed computing, or add annotated drawings and annotations to a drawing for others to view. (video: 1:20 min.) Add annotations to a drawing from other drawing types, including PDFs and other AutoCAD drawings. See how to annotate and add comments to your design, and how the annotation is integrated with the model in your design. (video: 1:37 min.) Access drawings in other formats. You can add drawings from other formats, including DWG, PDF, and LAS, directly into your drawings. Improved XML compatibility with other programs. You can export and import annotated drawings that you create in AutoCAD directly to
