AutoCAD 2010 introduced Application Programming Interface (API) for .NET developers. AutoCAD 2011 added VB6 support for AutoCAD applications. AutoCAD 2012 added Visual LISP language support and the new ObjectARX library. AutoCAD 2013 introduced a new C++ API for developers. AutoCAD 2014 introduced a JavaScript API. AutoCAD 2015 introduced an API for Visual Studio 2015. AutoCAD 2016 introduced API for .NET developers. AutoCAD 2017 and AutoCAD 2019 introduced a C++ API for developers. History AutoCAD is based on the older application system, Archicad, developed by the same company and released in 1989. The decision to develop AutoCAD from scratch was controversial, and led to the departure of the Archicad team after the introduction of AutoCAD. AutoCAD was originally developed for the Commodore Amiga platform. However, it was ported to Apple II and Microsoft Windows platforms for the first time in 1991. AutoCAD features an autodetection system that automatically determines the system and builds the program accordingly, making AutoCAD available on many platforms. The first version for Amiga was on March 3, 1989 and available to commercial customers on May 31, 1989. Commercial support ended in July 1994. AutoCAD first ran on Microsoft Windows 3.0. In 1993, AutoCAD for Windows became the first graphics package to support Windows 3.1. AutoCAD for Windows for version 1.0 was released on September 30, 1995. The latest version available is AutoCAD 2016. Version 10 was released in 1995. Version 12 was released in 1997. AutoCAD 2014 was released in 2013. AutoCAD 2015 was released in 2014. AutoCAD 2017 was released in 2016. AutoCAD 2019 was released in 2018. WASHINGTON — United Launch Alliance CEO Tory Bruno went on a tirade Wednesday when asked about the number of low-cost rockets under development. “They’re competition for ULA,” Bruno said of SpaceX and Blue Origin’s New Glenn and New Armstrong development, respectively. “We don’t have that problem with our Vulcan rocket. The only one.” Bruno was speaking at a press conference before a ULA launch of the U.S. military’s 2nd Wideband Global Satcom satellite from Cape Canaveral. NASA awards CRS-16 contract to ULA Bruno didn’t say whether he’d prefer to keep the monopoly on launch services, as ULA and the National Security Space Launch Program do today. But he clearly has no interest in new, low-cost vehicles being developed in competition. That’s particularly interesting because Bruno is a former Lockheed Martin executive, whose company was involved in the development of the highly successful Atlas and Delta rockets. When it comes to national security and government launches, ULA has a long history of having an advantage over the competition, usually by leveraging the government’s buying power. However, the post-NASA era of government launches is looking very different. SpaceX, Blue Origin and Rocket Lab are all developing new launch vehicles, with a mix of government and commercial missions. After the recent CRS-16 launch with SpaceX, the state of launch industry competition becomes much more fascinating to watch. Now ULA’s CEO is going after the idea of “competition” as something that shouldn’t even be allowed in space. Cabinet rules out any early elections, should it prove necessary to form a new government A decree setting out the basis for the next government of Greece has been signed by President Prokopis Pavlopoulos, under the country’s constitution, ahead of a meeting of the Cabinet to set out a date for its formation.

#### What's New In?

Standard CAD users have been accustomed to working in “soft” mode with easy-to-use tools that don’t present the amount of complexity required by the most complex parts of the drawing process. But, the traditional methods used to improve the quality of drawings don’t always scale with the design complexity of today’s CAD users. AutoCAD 2023 introduces a new, intuitive style of drafting that enables a new level of productivity through easier marking and editing of paper design models with the new Markup Import and Markup Assist functionality. The new Markup tools automatically capture and incorporate feedback from printed paper or PDFs. No extra steps are required. Markup Assist is available in the new Markup tool palette, enabling users to directly make modifications to their model with a traditional pointing-and-clicking interface. In addition, a new layer set has been added that stores the source or target location of a line or polyline, making it easy to trace back to the original drawing file, apply import template markings, and keep your trace files clean. Both Import and Markup Assist are available on the Drawing and Modeling tab of the Home tab. Markup Import is a fast tool that can be used to import feedback from any paper or PDF into a model without complex options or workarounds. Rapidly send and incorporate feedback from printed paper or PDFs into your designs. Import feedback from printed paper or PDFs and automatically apply changes to your drawing. No additional steps are required. Markup Assist uses an easy-to-use style that enables users to create, make changes to, and export notes and markups directly from the Markup tool palette. Managing or exporting the notes and markups created using the Markup tool palette is easy thanks to new actions in the commands palette, including a new export to.dwg action. Creating a freehand markup: New freehand markup creation using Wacom Tablet pen input. The previous version of AutoCAD required you to utilize mouse clicks in the drawing area to add text or shapes to your models. This version introduces a new drawing technique that enables you to create freehand markups directly on the model surface. Import an object with hotkeys: Intuitively access various features in your drawing with hotkeys. Quickly import an object into your
