The 3D View displays a wireframe image, and the model is constructed from a series of geometric shapes called meshes. Features You can combine and edit individual meshes to create complex models, and can use styles to apply identical visual and behavioral characteristics to a set of meshes. You can add dynamic geometry to your models by using geometric constraints, and you can add motion and animation to your models by using animation tools. The 3D View and other 3D modeling commands support 3D printing. The 3D View and other 3D modeling commands support the creation of external entities, such as sounds, animations, and particle systems. You can edit and modify materials. You can select and manipulate multiple parts of an object. You can use text to label components of an object. Q: Communicate with Azure IoT Core via RabbitMQ protocol I'm looking into Azure IoT Core as a possible way to easily integrate a Raspberry Pi with one of our existing IoT solutions. From what I can see, Azure IoT Core expects you to create a device context and then connect to it via an MQTT protocol. We have an existing application that already uses RabbitMQ (the Azure IoT Core implementation has a RabbitMQ server built in). I'm looking to figure out whether it's possible to use the existing RabbitMQ server to send messages to the IoT Core server. I'm aware that IoT Core does support the AMQP protocol, but I'm unsure if it can be used to send messages from a Raspberry Pi to Azure IoT Core. Is this possible? How would I go about doing it? A: The Azure IoT Core SDK for .Net (which is how you are communicating with the IoT Hub) uses the AMQP protocol. The SDK for Node.js will use the MQTT protocol. In your case, you will most likely be using the .Net SDK. The general rule of thumb is that you can use any MQTT-compliant broker/publisher to push messages to Azure IoT Core. Check out the documentation for details on how to use an MQTT broker/publisher in the SDK. Also, check out this article that explains the differences between the various MQTT protocols.
