History AutoCAD Architecture The
drawings that were initially made with
AutoCAD were limited to architectural
drawings. However, the program's
capabilities were enhanced with every
release, making it much more sophisticated
over time. AutoCAD History: Early Years In
1982, AutoCAD was introduced as a

microcomputer-based desktop program for architects and engineers. It was the first widely-used CAD program available for the desktop. The first version of AutoCAD was released in January 1983, and included a 2D drafting component, the first object-based 3D capability, and a basic 3D drawing package. The basic drafting features were limited to straight and 45-degree angles, dimensioning, and text. With its debut, AutoCAD was initially only available for use on small-business-oriented microcomputers, or minicomputers. The first generation of AutoCAD was released in English and French and sold for $1,995. (Three years later, the program's price doubled to $4,995.) AutoCAD was originally only available for use with IBM-compatible personal

computers. (Since its debut, the program has been available for both personal computers and workstations.) AutoCAD Architecture: The First Generation In the first generation of AutoCAD (AutoCAD 1), user-created drawings were stored in file "carts" and could be opened and saved at will. The program also supported screen-based editing of objects and blocks, and the ability to annotate drawings with text, line drawing, and graphic elements such as circles and polylines. By the end of 1984, AutoCAD was only one of six architectural CAD programs on the market. AutoCAD 1 was also the most sophisticated desktop architectural CAD program available. Its only rival was the 1982 Acuity Computer-Aided Design System, which cost $10,000.

AutoCAD Architecture: The Second Generation In 1985, the first version of AutoCAD architecture was introduced, and it introduced a new client/server architecture for 2D drafting and 3D modeling. The new architecture eliminated the need to open multiple files for 2D drafting and also allowed the drawings to be created in a distributed fashion on multiple workstations. The new architecture also provided for common blocks to be used throughout all of the drawings, eliminating the need for creating them in each drawing

Windows automation: SysAid is a popular product that allows users to automate

Windows applications using scripting and VBScript. AutoCAD's own Autonoma and AutoCAD direct connect plug-in allow users to automate AutoCAD. MFC Automation: MFC is a popular.NET framework for window automation that supports AutoCAD. Applications such as AutoCAD's own VBA, Visual Basic Scripting, Python, and Visual LISP API are also supported. I'm running the app on Windows Phone, and I want to force it to only run on Windows Phone and iPhone. Is there a way I can force my app to only run on one platform, without getting the Exception: "You need to distribute your app

only through the Windows Phone Store, Windows Phone Marketplace, and the iPhone App Store" A: You can't force an app to run on one platform only, but you can make it 'not run' on other platforms. What you do is add an app-file that states that you are NOT using X platform. That file will not be installed on any other system. It will only be used by one system. Q: How to remove specific table row from HTML using javascript? I have the following HTML code: 0 0 0 0 1 1 I need to remove the first row with 0 in both cells. How would I do that? A: just use a simple document.querySelector('td').textContent = ''; document.querySelector('td').textContent = ''; 0 0 0 0 1 1 All major airlines agreed on Wednesday to require customers to give up their mobile phones in plane cabins, according to a draft copy of an agreement to be proposed to the International Civil Aviation Organization (ICAO) by the US. According to the Associated Press, a copy of the agreement to regulate how travelers

conduct themselves in the cabin revealed the airlines' commitment to a "no electronics on board" policy. The new rules, if they are approved by the ICAO's governing body, would go into effect in a few years, after an 18-month trial period. According to the draft agreement, airlines would ban all screens or tablets, computers, phones, cameras or games, except to "receive urgent messages from the flight crew, if they are needed to keep the crew informed about critical matters or to assist in the event of an emergency." Bags or "persistent carry-on items," including laptop computers, would be permitted, as well as headphones. Airlines would also be required to provide two flight attendants for every 180 passengers, who would be required to restock and manage the

cabin's "limited space." All airlines will be required to provide free in-flight meals, the
