Free for both the trial and full versions of Calculor Supports all the functions and constants used in maths Simplicity makes it a great alternative to the Windows calculator Calculor More Info... Swipe through a whole Quick Look Screenshots Calculator is a free replacement calculator for Windows. You can use the same mathematical functions as the Windows calculator. It's a simple-to-use mathematical calculator for Windows users who want a lightweight alternative to the Windows Calculator. It does the job as well as the standard calculator but the advantage here is that if you need to perform some calculations while on the go, you can use this lightweight calculator. To get started, simply launch Calculator and type the calculation you wish to perform. For example, if you want to perform the math 2*5-2+3, simply open Calculator and type 2*5-2+3, press Enter and the result, 11, will appear on the top right hand corner. As mentioned earlier, unlike other applications of this kind, Calculator doesn't provide the standard layout you might be accustomed with. To put it another way, there is no numeric pad and no buttons to select the functions to apply. Instead, you get an editable text field that you can use to write your mathematical expression. As you begin typing in this field, Calculator displays the answer and, with every number or operator that you add, the result is updated. In fact, this is the utmost feature of Calculator, as it is designed to deliver a lightweight alternative to the Windows calculator that enables you to type in equations and get the result on the spot. Calculator recognizes popular constants used in maths, such as pi. Moreover, you can insert trigonometrical, and other such functions inside the equation and Calculator will calculate their value. Although it might not be as powerful as other scientific calculators out there, Calculator is a handy tool to have around if you need to perform computations quickly. Calculator - Instant Answer Simple and easy to use. I just need to type in my calculations and click 'Calculate' and then I get the answer instantly. No hidden functions etc.

Perfect for when I'm on the go. Calculator - Simple Calculator is a simple to use yet reliable and flexible calculator. It supports most of the most common functions in the standard 3a67dffeec

Calculor is an alternative to the Wndows calculator that has an editable text field in place of a numeric pad and buttons, and offers a wide range of mathematical functions. When you finish writing your equation, press Enter and Calculor will do the rest by displaying the answer. What's New in Version 3.22.0 (for 1.1.6) * We've added more Common constants, like Pi, e, and others. * Improved performance and graphical quality. * The Windows taskbar will now always be kept at the top, which should make Calculor seem more consistent with other Windows applications. * We have updated the Windows installer, so that the full feature set is made available by default. * We have also updated the documentation. * The Linux version of Calculor now runs natively on GNOME and KDE desktops. In fact, this lightweight tool will do anything you ask of it, as long as you give it an equation that you can divide by zero. You can enter scientific notation when performing calculations, which can be a real convenience. Instead of using long numbers, you can convert them to fractions and thus avoid having to use large amounts of digits and make your calculations faster and easier to perform. Calculor has all you need for quick and easy mathematical calculations, but one of its disadvantages is that you can't perform algebraic operations. In other words, you can't divide an expression by its root, or factorize. Calculor is one of the simplest calculators around and, therefore, it is one of the best choices if you need a way to perform mathematical calculations as quickly and easily as possible.
