Edit the web server to have read/write permissions to this folder. Once upon a time, at the end of the twentieth century, the climate change debate was robust, multidisciplinary and non-partisan. Twenty years ago, it was similar to today. During this period, scientists began releasing alarming data which seems to indicate that the human race is causing the planet to heat up. The debate became polarized and politicized; it lacked scientific rigor and was frequently expressed in hyperbole and delusion. No one paid attention. Then, in 1989, something happened. You may have heard of the Copenhagen Summit. At the time, I was president of the Council of Scientific Information. I was based in Brussels and my staff was coordinating scientific articles from around the world. Every day, I received scores of government reports, scientific articles, brochures, booklets, proposals, dissertations, articles, books and thousands of press releases. Although I was in the field, I couldn't read everything. One day, I came home and found an article in the newspaper which caught my eye. It was titled "Earth a 'Visible Eye' for NASA," and it described how NASA's first successful robotic foray into space, the Pioneer 10 spacecraft, would be transmitting images back to earth. At this point, I had worked in the scientific and technological field since my late teens and was definitely not a person who believed in a flat earth. In short, I found it incredible. Within hours, I tracked down an image of the first image, visible from earth, and I was stunned. In the photograph, I saw a spot at the edge of the sun's solar corona which looked exactly like the eye in the artist's rendering, composed by Fritz Heinemann in 1935. That same week, for the first time in history, the Intergovernmental Panel on Climate Change (IPCC) was born. The following year, Copernicus told the world that earth was round. And while this occurred almost on a daily basis, something was different. The previous two days had been the hottest two days in the history of the planet. The UK and Belgium had seen record level temperatures. Hundreds of people had died from heat related illnesses. All of this was happening as I prepared to write an article that listed causes of climate change. However

Call of Duty™ 4: Modern Warfare™ (titled Call of Duty 4: MW in some territories) is a first-person shooter video game developed by Infinity Ward and published by Activision. It is the fourth game in the Call of Duty series and was released on November 4, 2007 for the Xbox 360 and Microsoft Windows. Call of Duty 4: MW is the fourth game in the Call of Duty series, and is a prequel to the original Call of Duty (2003) set during the Cold War, between the United States and Russia. The game takes place in and around Washington, D.C., in April 1961 and follows a United States Army Special Forces soldier named Joseph "L.A." Daniels as he infiltrates a clandestine communist cell and kills several important communist leaders in the cell. The protagonist then searches for and assassinates a major Soviet military leader in Central Asia. After meeting with the Soviet leader, Daniels learns that the Russians have nuclear weapons hidden throughout the world. The game ends with Daniels and his squad being defeated by the Russians. Unlike the previous Call of Duty games, which had historically been single-player only, Call of Duty 4: MW's campaign allows for player interaction with several characters, including one of the leaders of the communist group that Daniels infiltrated. Players also take part in a three-person cooperative game mode, Frontlines, as well as several new multiplayer modes such as Kill Confirmed, which is a variation of the classic Capture the Flag mode. The campaign map is set in the Kremlin. Jiang Weiguo, vice chairman and chief executive officer of Shanghai-based manufacturer of consumer electronics Dongfang Electronics Group and a frequent player of the Call of Duty series, stated that the release of Call of Duty 4: Modern Warfare was "one of the most anticipated new titles of 2007." Activision CEO Bobby Kotick called the game "one of the most important releases of the year." And the game was a winner of the "Game of the Year" at the 2007 Spike Video Game Awards. [One of the main story missions has the protagonist infiltrate a large communist camp and assassinate a high-ranking member of the East German Komsomol and the other East German team. However, due to the quietness of the complex, the player is taken to the nearest guard. The guard notices the player and begins to shout at him. The player takes this opportunity to blow the guard's head off using a silenced pistol. [One of the main story missions has the protagonist e79caf774b

But i want to display only the part of the console like ?baddayhoo: :shrug: Dedicated Team: ?baddayhoo: :joy: ?baddayhoo: :joy: .
