Adobe's applications are just superb, they work beautifully. But one complaint I often hear about them is that they are too expensive. This is also helpful in speeding up the application and keeping system performance high but there is so much more to Adobe software than the product's cost, there is so much more. For photographers, the cost of Adobe Graphics Suite is more than half of the price of Photoshop. Usually, Adobe creatives use Photoshop CS5/ CS6 whereas Photoshop Elements is most often used by non-creatives. In addition to features mentioned in the article above, Adobe has introduced many innovations in Adobe Creative Suite and Adobe Creative Cloud. Some of these innovations include new tools for designers including Gradient Mesh and Type Mesh. They unified Photoshop Elements, Photoshop, and Photoshop Creative Cloud into one service. Creative Cloud has also improved the way it allows us to learn more through teaching us more. This service is also more cost efficient because it has less up front cost and allows us to use higher-end proprietary tools. Photoshop CS5 is currently in its latest version and is a very big upgrade compared to previous versions. This version was released on Tuesday, October 28th, 2012. The Release Candidate is expected to be released on December 10th, 2012. Most people still like to use the editor after the release of Elements 9, but now works became easier and simple. If you are thinking of getting a new computer or upgrading your old one, I will suggest you to get CS5.

Creating, sorting, and organizing your work can be time-consuming, and a lot of it is just a matter of

personal preference, so having a good workspace can make a big difference in the quality of your work. That being said, some users like the file manager and batch processing options built into Photoshop Elements. Others prefer the more familiar layout of Photoshop. Some prefer the ability to see everything at once and make adjustments or save a batch job over opening and closing apps. The choice is yours, and you can decide for yourself what has value for you. In the end, it really is just a matter of personal preference. **How do I prepare my images for editing?**

Creating your own raw files is the most important thing to do, since your camera doesn't record anything but just saves the image. You'll need some quality raw software to get the right picture out of your camera, e.g., Lightroom, Aperture, Photoshop Lightroom or Photoshop CS6. The settings for your raw conversion usually depend on the make and model of your camera. For example, when you use the standard raw conversion settings, you'll usually get the best results with Canon EOS cameras. If you shoot with Nikon cameras, try the NEF (RAW) conversion settings. If you are shooting in RAW, you will also need to attach the file extension. You might have downloaded your image from a website or social media outlet, but it didn't have the .cr2, .jpg, or .tif extension. Don't worry! Simply add that extension to the end of the file name to convert it into a supported file type. This will make your image easier to work with later on. 933d7f57e6
