Ten years after the first release of FIFA, the team at EA Vancouver has spent the last four years gathering unprecedented data from almost 1,000 high-intensity matches to improve visuals, realism and gameplay. “We’ve really listened to fans around the world and are delivering many innovations that bring FIFA closer to the real experience,” said Aaron McHardy, Head of EA Sports FIFA. “Fifa 22 Serial Key introduces new performance capture technology and a first-of-its-kind physics engine that is the most advanced in the business, providing a world-class level of realism. This includes incredible new visuals and animation, as well as the intensity, play, and flow of real-life matches. “Along with a new ‘instinctive’ formation system, core passing, and the new prediction engine, we’ve reimagined the game’s full-scale, authentic ground-ball system for the first time in 15 years. It feels great to play as some of the world’s best, from Messi to Thierry Henry, and we’re confident that this should keep fans of the beautiful game very excited.” The improvements to the ground-ball system will make the game more dynamic and tactically exciting, taking AI improvement even further. With a fully-optimized game-engine, users will enjoy a richer, more immersive experience when they play FIFA. “FIFA is one of the most authentic sports games ever and it continues to bring us closer to the sports experience in real time by bringing key gameplay innovations like the instinctive formation system to the fans,” said Nicolas Cantin, Executive Producer of FIFA on PS4, Xbox One, and PC. “The most notable changes this year will be the increased visual fidelity and the new accessibility and playstyles we have introduced with the new physics engine, as well as the changes to the ground-ball system that

will impact the control you have over the match.” The most noticeable new additions include the FIFA-specific improvements to the physics engine. With a physics engine, it is possible to dynamically alter the laws of physics to create a more realistic physics model. To do this, FIFA used the motion capture from real-world players to simulate their movements and interactions. Players will experience the next level of interaction, movement and realism in gameplay thanks to FIFA 22’s enhanced physics model.
