The game's controls were also improved, and they're more comprehensive than ever. The intelligence of real players has been built into the game, allowing players to make decisions that would be unthinkable at the direction of a computer. Key features "HyperMotion" technology FIFA 22 employs a "HyperMotion" engine to deliver a more realistic, "real game" feeling in virtually every aspect of the player experience. The controls have been refined and the movements of players have been made more intelligent, allowing players to make decisions that would be unthinkable at the direction of a computer. Quicksaving Quicksaves give the player more control over their game. More free kicks have been added and

the ability to interrupt the restart of play by going into the back of the net, after a shot hits the bar, was introduced. In addition to this, the free kick restart option has been changed so that players can press the button to restart play right away, or wait until the ball comes to them. Players can no longer slow down the restart by waiting for it to restart naturally. The mechanics of the play also have been improved, so that controlling the ball is easier when kicking it and a player can now juggle a ball in his or her own vicinity. Team tactics The “Team Tactics” mode has been significantly refined. The most obvious improvement is that players now have more control over the way their team plays. They can now choose when to dribble, when to pass or shoot the ball, and when to play the ball out of defence. They can also decide which player is going to shoot, pass or score based on which player offers the most support for attack or resistance against attack. Teams now have more control over the movement of players on the field, and can even stop their players before a pass is made or a goal is scored. Player Interactions The “Player Interactions” option now has a complete overhaul. The intelligence of the players has been built into the game, allowing players to make decisions that would be unthinkable at the direction of a computer. For example, players can now decide whether to go for an aerial duel or a tackle, and they can now decide whether or not to hold onto the ball by turning it over. Decisions like these are vital for players to adapt quickly to different situations on the field. The Performing
