I created a route in Amazon EC2 such that the S3 bucket contains some static files, but I do not know how to configure the mappings to route from the S3 bucket to the EC2 instance and thus to the.html files I am trying to serve. A: The simplest way to do it is to use the launch wizard with and/or port 80 and 443 and the correct security group. Open the EC2 console. Select Security Groups and click on Launch Wizard. Select the security group you want to use to allow access to S3 inbound. Check the dropdown and select "permit port 80, 443" Click Create. This is a very basic configuration, but you can choose how many instances you want to be in this group. The invention relates to a strap and particularly to a strap which is particularly useful for securing the foot to a conventional leg brace or cast and which includes a buckle which is adjustable to fit the boot or shoe in which it is applied, and to a method of making such a strap. Leg braces are well known in the art and typically are applied to the calf of the patient's leg so that the brace encloses or confines the patient's leg
