we have changed the default name of the cmake directory to be cmake, to emphasize its nature as a project system, instead of a simple configuration file. all our projects now automatically get created with this name. changing the default directory name also leads to the directory structure not matching cmake conventions.

that is why the cmake directory additionally contains a cmake\_install.cmake file, which is used to create this directory structure and to setup automatic rebuilding. most of the components in intellij idea ultimate 2016.3.1.1 are licensed under the terms of the apache license version 2.0. the license appears in the license file. the full text of the license is included in the file license-2. a copy of the license is also included at the project's home page. the license file specifies the required copyright notices, a plain-text copyright notice, and a more detailed license disclaimer. when you install a copy of intellij idea ultimate 2016.1 from the project's home page, a license file is included with the license text at the end of the unzipped.. ide itself, but all of the ides components are licensed under the apache license version 2. only the native tools are licensed under the mit license. ide can be upgraded to a newer version that is released after 2016.1, but this is not currently supported. edit configuration make changes to project settings. to do this, you can either edit the project with edit configurati command-line editor or edit the project's.idea folder using a text editor. the project settings allows you to make changes to the project's build, run, and run-configurations. these in turn can be configured for either debug or regular execution.
