Soal ulangan harian kelas 7 smp kelas 8 jul 09 2019..... About Us Contact Us Affiliate Program Corporate Information Privacy Policy Terms of Use More Info Privacy Policy License DMCA Policy Sitemap AdvertiseA voltage switching apparatus such as, for example, a relay or relay-operated disconnect, may include a main relay connected to a source of an electric current, which is interrupted by switching the relay from an open position to a closed position. When switching the relay, a high current arc forms as a result of an electric arc between the contacts of the relay. This can cause undesirable effects such as electric noise, unwanted arc splatter, and temperature rise, which may have a negative effect on the surrounding environment, the electrical equipment, and the operation of the voltage switching apparatus. In some cases, the arc may cause undesirable effects due to the significant heat released by the arc. A contact bearing may be employed to extinguish the electric arc in order to, for example, protect the voltage switching apparatus from arc splatter. The contact bearing may include a contact bearing body disposed within the voltage switching apparatus and a shunt wire disposed between the contact
