What is the Speed of Proximity? The Binary Message Speed of Proximity The speed of message diffusion determines the proportion of people.Q: Find event with higher than average value on a series of times I need to retrieve the event that has the highest value of on an array of times. So I have an array of times like this: Times: 0: 18 1: 17 2: 19 3: 13 4: 15 The times are for an event. 18 happened twice, and 13 happened once, so the score for 18 on this event is 2 points and 13 gets zero points. The event can have multiple occurrences. I want to get the highest-value event. In this case, it would be 18, however the next time could be a score of 5 for an event, so I don't want to get that, I just want the highest-score event. For now, I have some code that looks like this: public void getHighestScoreEvent(int[] times) { List scores = new List(); for (int time = 0; time < times.length; time++) { int score = 0; for (int i = 0; i < times.length; i++) { if (times[i] == time) { score++; } } last_score = i; } if (max_score > 0) { return max_score; } } return 0; } How can I adapt this so I get the highest-score event? A: This could be done by using LINQ to achieve this
