While Photoshop Express was a step forward, it had its limitations: it had limited features compared to Photoshop, was not as mobile-friendly, only worked with a subset of graphics files, and was not supported in all countries around the world. In response, Adobe developed a Chrome plugin called Web Workflow that had the same feature set as the native Photoshop tools. This allowed users to make basic edits and share them online in all formats. This, in turn, made the Photoshop tools more mobile-friendly. Today, Web Workflow has over 100 million weekly active users. Over time, the Web Workflow Chrome plugin added more features, such as rotate a picture, crop, and change its resolution. In 2014, Adobe brought the tool as an extension to Chrome. With Web Workflow, users could make screen casts on their computer and add web pages to their videos without having to resort to manual annotation. In 2016, while working on the Document Cloud Tools, Adobe discovered that their experimental tools could be ported to the browser to seamlessly run right in the web browser. This prototype was called WebAssembly, which made it relatively easy for developers to convert existing source code into WebAssembly. When web browsers started decoding WebAssembly, this project shifted into high gear. Adobe invested resources in WebAssembly along with the Emscripten project to implement WebAssembly features in the Chrome browser, just like they had done with the Adobe Edge Animate plugin. 933d7f57e6
