With the introduction of the pen, Apple's iPad has been at the forefront of digital painting, and the Adobe Flash app *Photoshop Draw* is built from the ground up as a fun way to use the graphics tool while staying on the cloud. Image sets are a great way to share files, particularly when they're created in a range of file formats or color spaces. Windows file systems are good for transferring working files, but remote environments for cloud-based collaboration are great for getting work done from any device. Live tile updates are a fantastic way to convey information from iOS to users of any device. I've recently been hard at work on an iPhone app, and was impressed by how quickly and efficiently updates to the app and the updating of the live tile happened. In this review, I've been using the iPad Pro with Apple Pencil and the selection of apps, Apple stock, and apps such as Adobe Photoshop to give you a glimpse of what's possible on a device dedicated to creativity. While in other Windows versions, Adobe Photoshop continues to support and expand its 'Reinvented with GIMP' idea, in Windows 10 they added a new tool box to manage blocks of images with similar settings. Thanks to this they now allow you to drag four images at once to a single list, to get them to work with the same settings (even better than the old 'Filter' box for that). This is again very useful, even if I can't help but feel that the GIMP engine works better than the Adobe one. Saves some clicks, no doubt and it's one of those things that will only make sense to a user of Photoshop. Having said that, let's have a look at the update itself.

Photoshop CS3 and CS2 is a great program for a photographer to use, but in recent years with the advent of computer make and powerful cameras, Photoshop has become much more than just a photo editing program. Photoshop CS3 and CS2 are great for creating video, which you can then transfer to a video editing program to edit the video.
