Corel's new version of PhotoStudio, newly known as PhotoStudio Pro, now features powerful new lightroom-like tools that make it possible to edit RAW images. You can now edit RAW inside PhotoStudio Pro, and the application is free for all users. You can use the raw editing tools even when you don't have access to Adobe Portfolio, Lightroom or Adobe Camera RAW. A new in-workflow editing feature introduced by Swatch is one of my favorite tools. You can now use Swatch's vector editing tools to create and move paths right from the canvas. This means that you can do any type of editing digitally without exporting your image to any other software. You can correct imperfections on the fly, and even restore original artwork. This feature is incredibly effective and makes it possible to strengthen your editing workflow, and carry out changes in layers in an instant. The latest version of Adobe's Creative Cloud is now available and comes with new features that are even better than the ones it introduced in recent past. One of the new features is the automatic retouching feature that lets you remove environmental distortions from your images. The feature is simple enough to use and makes it easier for both beginners and pros to get rid of those annoying portrait lens placements and distortions. You can use this professional tool even if your camera doesn't have an automatic correction feature. The new Photoshop features make it possible for designers, artists and photographers to work together faster and easier, regardless of their professional skill levels. In addition to being available on both Mac computers and Windows Desktop versions, Photoshop now offers a new flexible concept called Creative Cloud.

Adobe has announced the release of two major updates to Photoshop on macOS – the year 2020 update and the three months 2020 update. The year 2020 update introduces a range of new features with the introduction of 10 new Artboards to the Keynote tool, a new fullscreen feature for vector images, artist edits to vector masks, text-formatting tools, new filter features and artwork additions to the Bridge and Files Asset Management. **Note:** The update comes with a price of \$9.99, so make sure you either have room on your hard drive or budget for an upgrading. Original functionality is preserved and many of the features work in the same way as before. For example, text layers still behave identically to those in Photoshop. The **Retake** tool that was previously only available from the Classic menu or Filters panel has now been brought to the top of the menu bar, where it will be easily available to all users. It will also be available as a keyboard shortcut. There are also new, faster ways to apply and remove layers, and to edit masks. The Organizer is easier to use and any inconsistencies appear in the file immediately. And the Open dialog is now available by default in

Photoshop. One of the best new features in the 2020 update is the new "Draw" tool. Users can now use the drawing tools to draw on or edit existing shapes, circles, shapes and curves. This new feature works similar to the rule-based drawing tool in Illustrator. An array of drawing tools can be found in the Draw dialog, with the various options scattered in different tabs. The possibilities with this tool are truly amazing.
