TSplus-RemoteWork [Mac/Win] [Latest]

• Distributed Workstations, Enterprise Active Directory • Consolidated Desktop Session — Multi-user connection, Auto-save, Auto-logout • Freeware • Web Based • Version 4.1 • Company / Network Administrator (Windows/Linux based) • Web Portal URL (Virtual IP Address) • Mandatory Product Licensing: CPL.ASF. • IPv6 Support To get the TSplus-RemoteWork download, just click on the link below and wait a few moments for the download to finish. Download @ TSplus-RemoteWork Licensing CALENDAR:Product Video In this video, we show you all the features of TSplus-RemoteWork. The application is designed for the company/network administrator to manage all incoming client connections remotely. Having a good overview of TSplus-RemoteWork can save significant time and money as you will be able to remote access the workstations from a single office and not having to set up a software license for every PC that gets a remote connection. TSplus-RemoteWork is a flexible and easy to use remote access software, designed for companies with multiple offices and users. With TSplus-RemoteWork, you can easily configure one gateway server and centrally manage remote workstations. TSplus-RemoteWork allows the administrator to remotely access the workstations on the user's desktop, restart the session and perform any administrative task. As every remote connection is managed by one unique terminal, company's resources will be more efficient as you will only have to pay one product license for all remote workstations (i.e. one workstation license for every user connecting remotely to the computer). Features: Distributed Workstations, Enterprise Active Directory Consolidated Desktop Session Auto-save Auto-logout Version 4.1 Freeware Web Based Company / Network Administrator (Windows/Linux based) Web Portal URL (Virtual IP Address) Mandatory Product Licensing: CPL.ASF. IPv6 Support Please remember to share with your friends and subscribe for more tutorials and videos. Product video for TSplus-RemoteWork Description: In this video we

TSplus-RemoteWork

• Desktop Session Capture: Remote sessions allow users to resume where they left off. • Activity monitoring: Remote users can report on the workstation activity of the real user. • Remote Session Management: Enable users to manage their remote sessions, create their own profiles, record their activities, and switch between different remote sessions. • Terminal Services Session Inclusion: Users can include remote sessions into terminal services sessions or launch a remote session at the end of a terminal services session. • Remote User Account Management: The administrator is able to create and manage users remotely, as well as to disallow them specific actions in the workstation. • Network Access Control: The administrator can define which users are allowed to connect to the office and how many connections they can have simultaneously. • Connection Management: The administrator can define the connection type and configuration of the workstation as well as monitor the connection status. • Connection Information Management: The administrator can set up the connection information for workstations, such as their IP address, NetBIOS name, IP address of the server and the connection type. • Remote Device Management: The administrator can configure the remote devices, such as printers, webcams and modems and monitor their status. • Remote Session Security: The administrator can secure remote sessions and manage user accounts remotely. Access Server allows you to create your own network in a matter of minutes with no hardware or software knowledge needed. There is no need for expensive, specialized computers or expensive licenses for NT, 2000 or XP. You can create domain and trusts, you can create Active Directory and User Accounts, and you can create Network Resources like Routers and Firewalls. Access Server is designed to be easy to learn. That is the main reason why people like it, many find it to be intuitive and easy to use. Access Server Overview Access Server is very easy to install. You simply use the Wizard to create your entire network. Once it is configured, you will be able to use it to create domain users and groups; create NetBIOS users and groups; create a number of network resources, including Routers, Firewalls, Printers, Backups, File Servers, and so on. Once you are done with this, you can log in to Access Server. Access Server provides an easy to use interface to manage all of your network resources. You can create users, groups, and much more. Access Server has two modes:

local mode and remote mode b7e8fdf5c8

===== TSplus Remote Work is an easy to install, lightweight and powerful tool to remotely manage and view the desktop activities of your office workstations. It can help reduce the cost of office relocation and desktop maintenance. Its unique features include: - Clients are highly configurable, allowing the user to freely choose their own language and user interface - Web browsing is enabled for blind users, allowing them to comfortably use the system - Access can be logged through usernames and passwords - A high security proxy is provided to allow users to be authenticated through a proxy - Full support for Windows 8 Enterprise and other Windows Server editions - A remote connection can be captured and saved on the desktop to resume where a user left off - Microsoft Office Remote to Control OneNote is provided as well as an interface to view and print docs - File transfer support allows the users to access the files present on the remote computer - Access can be authorized with Active Directory and Group Policy support is provided - Supports multiple network protocols including RDP, VNC, VNC over SSH, SSH/VNC, SSL/TLS, FTP, HTTP/HTTPS, CIFS, SMB, and SSHFS - Remote Desktop Connection (RDC) proxy and RDP proxy support - Multiple language support - Multiple language user interface - Office support with OneNote, Visio, Word, and PowerPoint - Save unlimited sessions (compared to RDP where each session is limited to 25 connections) - Support for Windows 10 - Web interface supports IE11, Chrome, Firefox, and Edge Read More

===== Refer to documents and other content via Web browser, similar to the way you would in your office environment. Get reports, a CSV file or an XML document - User interface provides a web browser to view, save and print content - A report can be generated and saved as a CSV file or an XML document. The report can be sent through e-mail or saved in a user's personal folder. Access to a file system - File transfer has a similar functionality to that of local files, allowing files to be downloaded and viewed locally through the web browser - FTP server accepts commands through the FTP command line so that other applications can share files with the desktop environment. A file manager is provided on the remote desktop to

What's New in the TSplus-RemoteWork?
