Black and Blue image (which I'm suspecting is also from a Windows boot rescue CD) is from I'll try the same thing with W7 Pro, but after uninstalling. I know this question has been asked a thousand times, but I'm not able to get to a command prompt. I can get to a rather clear Windows 7 loading screen (The Windows logo, a grey progress bar, and three dots), then after a short pause the same thing as the black and blue image. Nothing more. I've checked my BIOS and dual-boot settings and everything is as it should be. I've seen several other people with the same problem. Usually somebody suggests swapping CMOS battery, putting in a known

good CMOS.tld file, etc. When I do that, it allows me to select W7 as a boot option, but when I press start, the screen goes black and the same image starts over. I've tried deleting the CMOS.tld file and changing to a stock CMOS. I've tried creating a new partition and using the Windows 7 repair tool. All of them have the same result. So, I'm out of ideas. Anyone?

A: I've had the same problem. Some of the methods given by others worked for me. However, the problem is that these don't fix the error, they just get past it. What fixed it was a windows repair, by the way I had the same issue while it was on a partition it had problems on. I used Rufus to make a bootable usb for windows 10 64bit. I'm using a Toshiba L850 D531 which is a 15" model. To find your

option key On my laptop I can enable or disable my wifi by pressing the Fn key twice. Then I can press F2 and I can see the function keys. F2 is the option key. There are some other functions on F2, such as lcd brightness etc. Sacharosal Sacharosal (from Sanskrit sachar, "sour," and sarala, "saliva") is a generic term used in Indian literature referring to various fluids.
