Wise JetSearch is a useful program that helps you quickly find items on the HDD, without using a lot of resources. Includes a straightforward and user-friendly interface This software utility has a simple, modern design and a highly intuitive interface that permits any type of user to run it, regardless of their previous experience with computers. You can select the partition to search in and input the keywords that interest you. After that, all you have to do is hit the "Search" button. The results are displayed in the form of a list that contains details such as name of item, path, size and the date when it was last modified. You can quickly sort files according to any of these details as well as copy the full path and directory to the Clipboard, and open the file or folder directly from the main window. Provides the query results right away The search results come up pretty fast and there is a small panel that displays how many items were found and the exact time it took. When hovering on the upper right side of the desktop, a quick search tool in a small window appears. Wise JetSearch provides users with extensive online Help contents and supports multiple languages, such as English, Chinese, Greek, Hungarian and Thai. The program has a small drawback though, seeing that it can only locate exact matches, and not partial ones as well (it is not case-sensitive). Moreover, it does not include filters that can help you narrow down your query. A tool that can help you find files on your HDD To sum up, Wise JetSearch is a useful software application that enables individuals to search for files and folders on their hard drives. The intuitive interface and search speed make the program efficient, but keep in mind that it can only find exact matches to keywords.
