# Library The Lightroom library collects images that have been imported or converted from other media formats. You can add images from multiple sources into this library. You can include RAW file formats as well as JPEGs. The images can be organized into albums. You can, of course, create sub-albums in the library.

Photoshop is used by tens of millions of people everyday. Photoshop is now the most popular app on the Apple store, and the most downloaded app in the world. It allows users to manipulate images by changing colors, mixing colors, adjusting brightness, adjusting contrast, resizing, cropping, apply effects, and adding decorative objects. Photoshop Elements is a great alternative to the Photoshop. It is designed to be simple for non-specialists to edit images and create their own graphics. It offers a simple interface, an intuitive toolset, and a beginner-friendly set of tools. There are many tools in Photoshop, but not all are useful for everyone. Q: How can I improve my email marketing? Would it be possible to use my website to collect email addresses and then use that information to market to them in the future? A: Sure. It is a good idea, and great for cold sales conversions, but I am not sure how practical it is for direct marketing. If you send out a mass email and it gets lots of b2b responses, then you can use those emails to follow up on those types of prospects via direct mail etc. There is no reason to not do this, but make sure you know the lead source and provide a call-back form for people that agree to be contacted in the future. A: Put yourself in your audience's shoes: How are they going to know they want to sign up for your service/product/whatever? Are you setting up a follow-up system to get them to sign up for a product you think they are going to use? If no, ask yourself, who is going to sign up for your service? Most companies do this, and I don't know why, after doing this, I am often contacted to ask "how did I get my name on the e-mail list?" I would set up a system where you ask for people to provide you with a name to add to your database. Mail will then be sent to the appropriate address(es) and you can follow up with people who are interested. If you get enough people on your list, you can do more. The question you have to ask is this, "How can we get people to sign up? Who are the people most likely to sign up for our service?" If you don't ask this, then you are not marketing, you are just collecting people's email addresses for your spam list. I have set up systems where we ask for a name of someone who we may send a survey to about a product or service, a company name and address. I then try to send a few emails and phone calls to find out if they are interested. We also ask for what name their employees/management might want to use when responding to email.

Note There are more powerful image-editing programs than Photoshop available for photographers. A good program such as Adobe Lightroom is suitable for editing RAW images, as RAW files are not yet converted to JPEGs. This can give a much more professional and creative result than the JPEG output that Photoshop gives you by default. To learn more about using Lightroom, see the end of the chapter 'Working with RAW files'. 1. **Select the Brightness/Contrast option**. The Brightness/Contrast dialog box appears.
