Advanced Editing In addition to basic editing, you can do advanced editing with keyframes, speed, and trim. You can create keyframes that indicate the start and end of a frame. You can also add in-between frames and keyframes, which enables you to do a speed adjustment. The trim feature allows you to cut out clips of a video to move and merge them to other clips. You can trim multiple clips at once. The trim feature uses keyframes to keep the clips and controls the length of each clip. You can also copy a clip to another location.
