Indomethacin is one of the most commonly used NSAIDs. In this study, we showed the effects of indomethacin on differentiation, apoptosis and expression of cyclooxygenase-2 (COX-2) in human amniotic membrane (HAM) cells. HAM cells were treated with various concentrations of indomethacin (0–12.5  $\mu$ M) for 0–72 h, and then the cell viability was examined by MTT assay. Osteoblastic differentiation of HAM cells was also examined by ALP staining after culturing the cells with different concentrations of indomethacin (0–12.5  $\mu$ M) for 21 days. Cells were also treated with 0–12.5  $\mu$ M indomethacin in 12.5  $\mu$ M sodium butyrate (NaB). And the expression of COX-2 was examined by western blotting. The MTT assay showed that the viability of the HAM cells was not significantly affected by the indomethacin treatment. The ALP staining demonstrated that indomethacin inhibited osteoblastic differentiation of the HAM cells in a dose-dependent manner. The western blotting also showed that the expression of COX-2 was reduced in a dose-dependent
