

Borgnacke and Sonntag 4.e An ideal gas undergoes an expansion process in which its volume is doubled. Which process will result in an increase in work: . +1. expansion from volume V2 to volume V1 with a change in entropy -2. compression from volume V1 to volume V2 with entropy change -3. isochoric process -4. isobaric process -5. isothermal process -6. adiabatic process -7. isothermal isobaric isobaric process Adiabatic isochoric isobaric -8. -9. isotherm 10. isothermal isochoric isobaric isobaric -10.
