from doing so? Thank you for your feedback.Q: Plain text formatting via command line for CXF Server I'm trying to send some plain text via CXF (either SOAP or REST) and I want to specify the character encoding for plain text (i.e. latin1 or ISO 8859-1). I have a Java class that has a header and a body, and I can specify the desired character encoding of the header and body. In the last part of this question, I am wondering what would be the most appropriate way of doing this in a CXF client (I am using CXF 2.6.3). Any tips? What I tried and doesn't work:

```
MessageBuilder builder = MessageBuilder.withPayload(body);
builder.getRequestHeaders().put("Content-Type", "text/plain");
builder.getRequestHeaders().put("Character-Encoding", "ISO-8859-1");
```

I have seen examples of using MessageBuilder.withPayload(String content) and also MessageBuilder.withPayload(byte[]) but this doesn't seem to apply to plain text. e79caf774b
