Apr 25, 2019 This is a plugin for the .NET Framework which provides OPC/UA servers. Some of the features are device and service discovery, . The OPC Systems.NET API. By using this API you can create your own OPC Server programs. The OPC Systems.NET API. is used to create standalone and embedded OPC Server programs, to access device data from OPC Servers. Sep 24, 2019 OPC Systems.NET API, a .NET API for OPC Servers. A: This should be a rather straight forward process, you will need to download and install the generic OPC servers, you can find them here: Generic OPC Servers They come in the form of DLL and PDB files, and you will need to have the source code for your product to do this process. The DLL is an executable that allows you to access the OPC server, in this case the OPC UA servers, through a DLL call. PDB is not needed, just the DLL file. To install the DLL open the command prompt and navigate to the directory where the file is stored. Then enter: "C:\Program Files (x86)\OPC Systems\Servers\Generic OPCTypes\OPC.UI.Server\bin\OPC.UI.Server.exe" This will start the executable which will check for DLL dependencies on the system and then prompt you for this file. Select your dll file and click OK. For the PDB (optional) open the folder where your PDB (if it is installed) is located, select that file and move it to your command prompt (this will make the executable using the dll locally). Note that after you add the dll dependency into the list, the executable will add a dependency for the PDB into the list, but it is not required. You can then create a batch file with the appropriate commands, which would be: OPC.UI.Server.exe OPC.UI.Server -i This should be a good start.
