English version? A. What is the "Perfect Admin" in the German version? A. PerfApp offers real-time monitoring and control of the programs running in the background. You can easily configure what programs are permitted to run, and you can also schedule certain applications to be launched at a particular time. All actions are logged in detail. PerfApp is a desktop tool - all programs are run in the background

and in a separate process - that cannot be shut down by the user, even if it is terminated by the operating system or other applications. Please note that PerfApp does not replace a system administrator. The monitor only processes the background programs and the launching/opening of these programs. When using this software you also need to have a comprehensive monitoring and control

system in place, such as LogWatch.

What's New in the Perfect Admin?
