Plant Anatomy By B P Pandey.pdf

F. G. Aganya. Category:Botany books Category:1932 booksThe present invention relates to a novel and useful cat litter box. Large animals, such as dogs and cats, are very clean animals and should be kept clean. To achieve this, cats and dogs should have access to an area in which they can defecate and/or urinate. While nature has provided cats and dogs with a variety of materials with which to accomplish this, such as soil, sand, bark, leaves, grass and other items that are usually plentiful in the local environment, there are several problems with using such materials. First, use of these materials may pose a danger to the health of the animal. For example, a scoop of soil which has passed through an animal" is intestinal tract is known to carry pathogenic bacteria. Further, sand and soil which have been ingested by an animal is known to lodge in its stomach or digestive tract, causing various disturbances including gastric upset and/or infection. Leaves, grass and other plant material which are ingested by the animal carry various diseases, such as worms, which may eventually be passed to a human in contact with the animal. Another problem with using natural materials to litter is that, when the material is used as a substrate for the material, it must be continually replaced, if not every few days at least several times a week. Replacement of natural materials requires the owner to make an effort, which may become too burdensome for some owners. Further, the use of natural materials may pose a fire danger to a building upon which the animal defecates or urinates. Accordingly, a need exists for a device that is relatively inexpensive, safe and convenient for use in providing an area for an animal to defecate or urinate, and which does not carry the same problems associated with natural materials such as soil, sand, bark, leaves, grass and other items that are usually plentiful in the local environment. It is an object of the present invention to provide a cat litter box which is relatively easy to use and to m

You are given a plant and you are asked to find its seeds. The plant is in a sealed box of cotton. All that can be seen is the bottom of the box. A paper will be laid on the floor of the room and the name of the plant will be written on the paper. Now mark the plant in any way you want. Write its name on the paper, then take the plant out of the box and put it on the paper. If you do the procedure correctly, the seeds of the plant will be seen from the inside of the box. If you know how, you can close the box. You are given a plant and you are asked to find its seeds. The plant is in a sealed box of cotton. All that can be seen is the bottom of the box.
