So, I need to mock the IEnumerable and mock each of the results inside the _results list. I can do this with RhinoMocks, but I am getting an error with Moq that the DoSomething() method does not exist. I'm trying to use Moq, but I guess that's because Moq doesn't support mocking of method calls. Is there a way to mock the DoSomething() call? The problem is I don't know if DoSomething() is dependent on any other method calls. A: You can make it work this way: var result = new Mock(); result.Setup(x => x.DoSomething()).Returns(new MyResult()); This code will do the same thing as Moq. If you do not want to use Moq, you will have to make an object that will act a1d647c40b
