The Palestinian leader, who died aged 75 in 2004, is facing a sentence of between ten and 20 years for crimes against humanity at the end of the trial at Nanterre. The court heard Arafat organised his own death as the Oslo Accords were being negotiated in 1993, and was active in the militant Fatah organisation. In November, it was ruled that the French court has jurisdiction to pursue the case against the Palestinian. He was accused of providing material support and other forms of help, which were used by the military wing of Fatah to commit violent acts. The prosecution is also looking into accusations he incited violence that lead to the deaths of some 400 Palestinians during the First Intifada. The trial ends tomorrow when the

The in vitro activity of the new quinolone moxifloxacin and that of other quinolones such as ciprofloxacin, levofloxacin, tosufloxacin and gemifloxacin was investigated against 120 recent clinical isolates of 12 respiratory pathogens (Staphylococcus aureus, Haemophilus influenzae, Moraxella catarrhalis, Streptococcus pneumoniae, Streptococcus pyogenes, beta-Streptococci, Klebsiella pneumoniae, Klebsiella oxytoca, Streptococcus agalactiae, Citrobacter freundii, Acinetobacter baumannii and Pseudomonas aeruginosa) by use of two interpretive criteria recommended by the National Committee for Clinical Laboratory Standards. In addition, susceptibility was determined by microdilution and Etest methods, and activity was compared with that of ciprofloxacin. Moxifloxacin was the most active of the quinolones tested against all isolates (MIC90
