Field of the Invention The present invention relates to an image sensing device and a method for controlling the image sensing device, and more specifically to an image sensing device capable of properly performing

exposure control and focusing control, and a method for controlling the same. 2. Description of the Related Art Conventionally, there is an image sensing device which is capable of auto focus (AF) control and exposure control (brightness adjustment) which controls the brightness of a subject image on an image sensor or an image sensing element. In this image sensing device, a phase difference detecting AF sensor which detects the defocus amount of a main object and a distance measuring AF sensor which measures the distance to the main object are provided, and AF control is performed based on detection results (for example, refer to Japanese Unexamined Patent Application Publication No. 2003-520538). Furthermore, there is an image sensing device which has a function of correcting the measurement value of the distance to the subject by a calculation using a distance value from an AF sensor and e79caf774b
