Evalaze Commercial Edition 2.2.1.1

To be more specific, the evalaze is the best and powerful platform to package application with ability to package exe files and aplications, create virtualization environment that separate apps from host, change current installation app into virtualized app, capture apps states before running, capture apps states after running and save each one of them to file. It's a most powerful application ever, used by many application virtualization providers (VMware ThinApp, InstallRite, Enigma, MoleBox...), and so on. To be more specific, the evalaze is the best and powerful platform to package application with ability to package exe files and aplications, create virtualization environment that separate apps from host, change current installation app into virtualized app, capture apps states before running, capture apps states after running and save each one of them to file. What makes the evaluation version for Evalaze stand out from the crowd is its ability to create portable application that is not a requirement to have windows software installed on the hard drive. When you run an application in Evalaze it immediately presents a window system where the consumer can run the software. This means that you can run your browser from Evalaze or even use your word processor from within a VMware. This opens up a whole new world for you to enjoy. Most applications

should run normally from this environment, but there are some applications that will not run well from this method. In short, Evalaze gives you the ability to run applications from one window and transfer them between virtual machines. With its smaller size and only taking up about 0.7 GB of the hard drive space Evalaze is able to allow you to run that application in virtual machines on both your computer or even your portable devices. And because Evalaze is only a shell application, you can easily load up your virtual machine and transfer it between your computer systems to have the ability to run your application whenever you need, whether you are at your home computer, your office computer or even your laptop. Also, it is fully compatible with VMware.
