Features include: - Smart Breakers - Superior Artificial Intelligence - Precision Passing - Player Styles Hyper Motion All-new "Hyper Motion" completely recreates the physical and physiological characteristics of the players it covers - players run, sprint, tackle, dribble and complete passes as they would in a match in real life. FIFA 22 uses a physical simulation engine to model the active forces and acceleration of the players in every interaction as they move during matches. This results in the most realistic and authentic control on any sports game simulation. By factoring in each player's heat and fatigue levels, natural fatigue, player weight, bodily mass and reaction speed, it generates a player model that more realistically reflects the "real-world" way that players react, interact and compete. A large pool of motion capture data from actual players is sampled in incredible detail on a per-player basis, and is then used to provide players with a more authentic physicality and style of play when competing in the game. Each player's movement is closely aligned with his or her real-world behavior in the game. For instance, players sprint more when fatigued, and dribble with less bodyweight when they are fatigued. High-intensity players tackle other players with greater strength and ferocity to create a greater collision radius than slower players, and dribble and pass with greater intensity than others. The Play Styles Player Styles are now dramatically enhanced, with enhanced interaction, increased performance potential, and improved visual characteristics. Using the types of passes and dribbles the player performs in real life, we are creating a variety of styles that players will have access to create a more authentic and diverse gameplay experience. The front and defensive players have a complete physicalization of hand actions in an attempt to give them a more authentic feel. Actions, movements and behaviors are now very distinct between players of different styles and different skill levels, allowing the AI to quickly and easily switch between styles and effectively adapt to new situations. Player Status and Performance Includes enhanced AI, including the ability to call specific tactics and formations on the fly, and its team behavior has been completely altered. Players will be given specific tasks, with the ability to use their attribute and specializations to perform them. In addition to all this, we have

What's new:

- **Player Vision** - Add vision to the new player collision logic. This means that every player can now see every opponent when playing on the field and react when one player takes possession of the ball by moving towards the ball's location.
- **Dynamic Stamina** - New system that more accurately reflects the amount of effort used when doing all manner of things.
- **Ball Physics** - New launch angles for lobs and balls that roll to and through the goalkeeper. Rejecting close range shots is also more accurate. The new, optimized interactions between the ball and player body improve the responsiveness and intensity of the ball.
- **Ball Discovery** -> Exclusive new feature that brings ball movement to life with the aid of two cameras: one above the pitch and the other below. This helps to give balls its unique movement in addition to define its path as it drifts across the pitch.
- **Touch Control** - Improve touch and grace in a way never before seen in EA Sports FIFA games thanks to a new refined system.
- **Recovery System** - Improve the realism of heading the ball in "FIFA Ultimate Team." Each player will pick up the ball in possession with differing degrees of motion depending on their direction of movement and whether they passed the ball or received it from a teammate. The system is dynamic and reacts based on the player's speed and direction.
- **New Pass Movements** - Improved pass options in a way closer to real-world techniques. You can now decide how to pass the ball, challenging defenders with different options such as the off-the-ball pass. Also, defenders may be closer or further away from the play depending on how long you have possession.
