Given the recent upgrades to support the latest macOS APIs, support for the M1, and the distance they're from having even shipped, I'm looking forward to seeing what Adobe has planned for native GPU-based 3D in conjunction with the future of Photoshop Creative Cloud in this exciting time. With that in mind, let's have a look at the video showcasing the native GPU-based 3D in Photoshop. I think this is a fascinating time to look at the release of the 2019 versions of both the Design Suite and Elements. The move to native GPU-based 3D means the software's time as a desktop tool is coming to an end. It's time to look to the future. I'm not sure we should look

back to Elements (I don't think we will) as Adobe migrated the software to use the macOS native APIs — which required new UI tooling, testing, and support. So it's my assumption that we will move to adopt the native macOS UIs for the Design Suite and Elements to come.
