Applewhite/AP The strong dollar
was a major driver of the steep
stock-market selloff at the start
of 2018. But that's all about to
change. This year, the dollar is
on track to weaken as much as
12 percent — and that could be
one of the best things that ever
happened to stocks. The year

2018 is turning out to be one of the most significant, and unpredictable, in modern history. But there's one variable in particular that has eluded many investors, economists and the political establishment: the greenback. The dollar's strength this year should force the Federal Reserve to act sooner on interest-rate hikes, and when they do, it will have a dramatic impact on the stock market, the broader economy and the political landscape. "It's the biggest elephant in the room," says Larry Bernstein, senior

portfolio manager at San Francisco-based Bernstein Global Wealth Management. "It's the strongest currency in the world, and it's driving the dollar higher." A stronger dollar this year will cut imports and boost exports. It will also drag the Fed's preferred measure of the U.S. economy, gross domestic product, down. The effect could be especially dramatic at the start of 2019, when the Fed could start raising rates. "We've never had a stronger dollar in history," Bernstein says. "It's never been at a higher level, and

it never will be." Now, it's a coin
flip whether the dollar will
continue to f988f36e3a
