If you are a professional developer with two or more years of experience, that may not be a problem. But if you are a beginner, I think that the experience of someone with an acknowledged experience with the program in question should be more valuable. I haven't noticed as much of a difference. In fact, I've noticed a feature that I am really happy to have. The ability to resize your image and have it up for editing slowly. Adobe has received a lot of requests to make initial 3D editing easier than with Photoshop 3D. In response, you can now use the new 3D tools on all the photos in your NAPP Instance directly in Photoshop using the New Photoshop 3D pane. Use the New Photoshop 3D pane to edit 3D layers and 3D shapes using modern editing capabilities and control and manipulation of 3D layers and 3D shapes using Photoshop's robust features. For example, the 3D tools now mirror and extend your 2D editing tools, such as the Quick Selection and Image-to-Image tools. Additionally, many of the traditionally hard-to-use (particularly for Photoshop novice users) 3D tools are now more intuitive with helps, tips, videos and tutorials that teach more of the nuances of 3D editing using the new 3D tools. The Adobe Sensei Feature also enables Photoshop to automatically perform powerful image adjustments such as Retouching—typically requiring multiple rounds of adjustments (which Photoshop Elements currently doesn't allow)—within the same click, enabling users to deliver more beautiful images in no time. The new operating system is more robust, too. Whether you're working on the desktop or on a mobile device, Photoshop Elements no longer freezes as you edit. And, with built-in organizational tools (such as the new Organizer, Slideshow, Smart Objects, and Account Logos), you can easily manage your images. Adobe's powerful file format, PSD, doesn't change, either, so you can continue to work efficiently with images from your friends and colleagues.
