The latest version of the popular software Adobe Photoshop brought its version number to 2023 and has a number of enhancements; among them some performed with Artificial Intelligence (AI). With the update, enterprises can design and produce branded content by integrating the power of AI, in-product analytics and machine learning. Consumers get enhanced photo editing capabilities such as the ability to select an objects or the color of the background and then automatically correct them based on a wide array of criteria, from the brightness of the photo to the color balance, which may include the hue or saturation. Adobe also added new tools aimed at smaller companies as they wanted to add their content without buying a big-ticket subscription. One of those tools is Photon Server, which is a server a business can buy that connects to a Lightroom mobile device rather than waste money on a subscription. Finally, Adobe also made a number of smaller, but important, enhancements such as adding more type sizes to the font panel to making the brushes and patterns panel easier to navigate. The latest updates also address some of the bugs that have been a part of the software for many years. In addition, the new version now supports the new file format workflow extensions from Adobe and its collaborative features in Photoshop and Photoshop Elements. Especially when getting started, the ideas never end. You're afraid to go out in daylight, they cost too much, you've messed up one or

two shots. How do you deal?
