The user is able to change the materials used for an existing design, and they can include new materials. By utilizing CAD, a user can design a new building and can use AutoCAD Architecture to analyze the existing design, reduce the required materials and energy to build the new design, and maximize its efficiency. History In 1989, AutoCAD Architecture was the first CAD software product to receive an award at the Macworld Trade Show. AutoCAD Architecture won the Technical Achievement Award in the Computer Hardware, Programming, and Applications category, and in the same year it was the only CAD product to receive a Product of the Year Award. In 1990, the company partnered with the Architecture and Engineering Technology Center at Wake Forest University and started developing architectural software as part of its BIM program for the CAD curriculum.
