Traditionally, PostScript printing is used in the printing industry for high-quality desktop publishing and some form of desktop publishing has always been included in the base cost of Apple's operating systems. In the past, most Macs have included PostScript printing, but since OS X Lion, any iMac or Mac with a Late 2009 Thunderbolt Display (not a 27" model) or an iMac or Mac with a Late 2010 13" Retina display can print using a PostScript printer. In addition to Macs, most PCs can print using a PostScript printer as well. However, the graphics you create in Photoshop and other graphics programs are saved in the

Q: What are common ways to organize codebases with respect to memory (RAM)? I am working on a C++ program that is getting out of hand, and I have split it into several fragments, ie, it looks like this: Fragment A Fragment B Fragment C Fragment D Fragment E Fragment F Fragment G Fragment H Fragment I Fragment J So, Fragments A - F are going to fit in RAM. In other words, I will be able to allocate a certain amount of RAM and not have to worry about fragmentation. How should I organize the code to avoid fragmentation of memory? Keep in mind that my goal is to make fragmentation as low as possible, but there are many other constraints. A: Do not allocate things on the stack; instead allocate them with new, or malloc. If you do need to allocate on the stack, then try to allocate a single-task size buffer for each block, and see if you get enough free "time" in a block to free the buffer and reuse it before the next block. If you can't do that, allocate a stack frame for the block, and do all your bookkeeping in the stack frame. This may have higher overhead than the above plan, but it may be worth it. Finally, don't build big structures on the stack. Each block may cause the entire stack to be reallocated, and it's hard to get the stack back. Is West Ham prepared to pay more than £40m for Filipe Luis? West Ham United are said to have made a £39m bid to sign Filipe Luis from Atlético de Madrid. The 29-year-old centre-back has been one of the highest-profile players at the World Cup, with the national side very active in the transfer window. West Ham's hand may be forced by the fact that the striker Manuel Lanzini has been the subject of interest from Manchester City, with the Blues recently moving into pole position to sign him. Diego Costa is leaving in the summer, but West Ham feel that with the Brazilian attacker Samir Nasri set to leave the club, they should actively be looking to add offensive depth. Filipe Luis does have some limitations when it comes to marking set plays. West Ham coach David Moy
