AutoCAD has a large number of commands. These can be accessed either by the main menu or through the ribbon, which is divided into tabs. Each tab is linked to a specific set of commands, and contains icons to allow you to use those commands in a single operation. Below is a list of the different tabs and their primary commands: Here is a list of the different tabs and their primary commands: If you are unsure how to use a specific command, look it up in the Help system. In 2018, AutoCAD 2017 introduced a new scripting language called Script+, that is in a similar fashion to AutoLISP and Visual LISP. With a change in code, AutoLISP, Visual LISP and AutoScript+ could easily be ported to AutoCAD 2016. Script+ can also use the ObjectARX library. Included in AutoCAD 2017, AutoScript is a scripting language used to program a series of commands. AutoScript was being revised for the release of AutoCAD 2017. In 2008, AutoCAD introduced a new scripting interface called XMIScript, and has released similar interfaces for VBA, Visual LISP and Script+. This interface allows users to access a set of functions and commands in a script. The interface is modeled after XML, but it also includes a set of functions called "XmlFunctions" which are functions that take XML as an input and return XML as output.

Applications AutoCAD also includes a number of built-in applications: Types of applications AutoCAD enables architects, drafters and other designers to create projects, by creating and editing drawing-based documents. AutoCAD is used for design-related projects ranging from major architectural and engineering projects, such as major power stations, hospitals, railway stations, bridges, tunnels and other large-scale projects, to smaller projects, such as home design and hobbyist projects. AutoCAD is a project-based application for the Windows desktop platform, with versions for Microsoft Windows. Since 2006, AutoCAD has also been available for the Mac platform and iOS. With AutoCAD 2010, a cloud-based version of AutoCAD became available. In addition to AutoCAD itself, AutoCAD LT is used for small drafting projects and AutoCAD 2009 SP1 is used for creating large, multi-user projects. These are less expensive and less complex products, which are tailored to individual project needs. AutoCAD Web Edition (Autodesk DWG) is a product built on top of the web standards. It provides users with a web application designed to view, edit and save DWG files. Users can use it with all web browsers, from Windows, Mac and Linux. AutoCAD Web Edition is only available through AutoCAD distributors and an Adobe

Flash-based client, as of version 2011. AutoCAD LT is an entry-level CAD system. It is designed for

The house budget plan will cut government spending and mandate spending cuts throughout the rest of this year and into 2013. The plan calls for a 2.4 percent cut across the board, including cuts of 6.2 percent from federal programs, a reduction of about 1.8 percent from local governments, and cuts in overall government spending of 0.8 percent. This is not about cutting government, it is about cutting government spending. What really hurts is that the plan does nothing to address the problems caused by the 2008 financial crisis. In fact, the cuts are so severe that the House budget plan threatens to force the federal government to fall into a technical default. But as long as the federal government is bleeding and the states are hemorrhaging, it won't have to worry about falling into a technical default. After all, these cuts are only the beginning. The current proposal will cut \$400 billion in spending from the end of fiscal 2013 through the end of fiscal 2016. If the present plan is enacted, total government spending cuts will hit \$1.6 trillion by the end of fiscal 2016. This, if enacted, will make up about a third of all federal spending in the U.S. For an economy the size of the U.S., that is huge. Even the Congressional Budget Office says that spending cuts on the order of \$1.6 trillion would push us into a deep recession. The consequences of these cuts will be devastating for the economy. As we documented in our August report on the impact of budget cuts on the economy, the annual reductions in government spending over the next decade will fall short of stabilizing the current economic recovery. But instead of fixing the budget to create the conditions for a robust economic recovery, Congress has chosen
