#### What's New in the SurfaceWorks?

SurfaceWorks is a powerful application that allows you to create models by combining

---

solid and surface modeling. The program is designed to assist professionals from both mechanical engineering and industrial design. The SurfaceWorks user will be able to incorporate SurfaceWorks surfaces into the design of SolidWorks parts and maintain 100% editability. The application is integrated with SolidWorks, making it possible to develop parts from 3D models using 2D surfaces and generating other surfaces that SolidWorks designers and machinists might need. SurfaceWorks allows you to enter dimensions, colors, styles, and paint information directly from the SurfaceWorks toolbars and menus.
