They say that a camera is just a machine that captures light. Photoshop CC is nothing less than a machine that processes light. What it really means is that you can apply lots of filters, adjustments, and color and tone corrections. The potential is astronomical. Not only does Photoshop CC play to the strengths of the iPad Pro, it also shouts loud and clear that Apple is ready to break away from PC hegemony in this area. It's amazing how much more impressive CS6, and for that matter, CS7, looks and feels on the iPad than they did on the desktop. The fact that low-powered computers continue to outpace higher-powered ones is no longer a factor in any way. And budget-conscious parents may be thrilled to know that parents' kids can now be spared the expense and burden of buying a Mac. Fortunately, Adobe has left no stone unturned in ensuring that the upgraded software is very intuitive and user-friendly. Photoshop CC on the iPad shows us that a higher standard of work can be achieved by drawing directly on the surface of a tablet. Once there are really powerful tools, then a computer can take a back seat. For some time now, Apple's cameras have been the default for photographers finishing projects on the Internet. But the Internet can be slow, unreliable, or blocked by various filters and proxies. It is only right that a tablet can provide the solution for those times and in those situations. And that gives Apple a lot of new opportunities. Is it useful for everyone to edit a picture at high resolution on his or her tablet? Probably not. But for the special cases where, for one reason or another, you don't have a Mac nearby, the iPad can provide a quick and flexible solution. And that may not be the only use for a tablet. Other industries may also be ready to follow Apple's lead by using tablets in their day-to-day operations. Just think police officers, airline pilots, or doctors that can use a tablet to write reports or take digital notes. Or, yes, photographers may not be the only ones to use a tablet.
