* **Editing tools:** The tools that you use when editing an image include the Selection Brush, Free Transform tool, Eraser, and the Filter Gallery. * **Layers:** You can work with individual layers or multiple layers. Layers give you freedom to be selective about how you modify your image, whether you want to move a group of layers to a different part of the image or manipulate individual layers, which enables you to

use multiple layers and manipulate those layers with different effects. The image in Figure 5-1 is composed of four layers.

You can use the Layers panel on the right side of the Photoshop window to arrange layers in the order in which you created them. You can also display and hide individual layers, and you can change the order of the layers on your image. You can change the order of the layers to better organize them if you need to. Layer visibility can be toggled on and off by clicking the visibility icon to the left of the layer name, or simply click the eye icon. * Masking: A mask is a selective area of an image that prevents the image from being edited in a particular area. A mask is represented by a transparent area surrounding the

area of an image that you want to mask. You can use the color or shape to create a mask. Note the mask shown in Figure 5-1. The rectangle over the lady's head is a mask, and the rectangular area surrounding her face is not. You can also use the Live Paint tool to create masking or create an alpha channel. The Live Paint tool is useful for creating masks quickly and easily. You can edit the mask created by the tool by using the Layers panel. * Tools: You have many tools at your disposal in Photoshop, including the Selection Brush, Free Transform, Pathfinder, Free Transform, and the Brush tool. * Specularity: Specularity is similar to reflection. Both reflect the image of another object or element, such as a mirror, a shiny

object, or a shiny wall. In Photoshop, you use the Specular tool to create and manipulate specularity. * Transparency:

Transparency lets you alter the transparent areas of an image. You use the blending modes to combine the transparent areas of an image with the parts of an image that are not

transparent. * Working on a background: You have a choice between working on a white or a transparent background. * Text: You can create text within the bounds of your art area. You
