This tutorial will guide you through the basic tasks that you can perform in Adobe Photoshop Elements. The actual lesson is a short, text only tutorial that will show you the workflow for the actions that are listed in this tutorial. You should be familiar with the general layout of Adobe Photoshop Elements before reading this tutorial. You should have a basic idea of how to use the tools and workflows in Photoshop Elements and have an understanding of the most basic concepts such as layers, paths, masks, selections, channels, etc. As there are many steps in this tutorial, it is a good idea to go through it once in order to familiarize yourself with the different steps. Basic Photoshop Elements Actions and Workflow The workflow in Photoshop Elements is very basic, and does not use the standard PS Actions workflow as in Photoshop. There is also no workflow for creating frames in the Elements and no easy way to apply multiple frames on your image. Let's first take a look at the basic

Actions in Photoshop Elements: There is no action called “Add text” or similar. Instead you can use the “Type” action to create new text. You can also use the “Highlight” action to highlight certain areas of your image. In the “Type” and “Highlight” actions there are many options that can alter your image in different ways. Lighten, Darken and Color Correction In Photoshop Elements, you can use the Lighten and Darken action to either lighten or darken your image. There are two ways to do this: • Lighten or Darken the image according to the color settings in the “Upper Left Corner”. The color settings are the color of the gray box. • Use the Lasso tool to define your areas to change and click on the “Adjust” button. The Color Correction action does not work as in Photoshop. It’s instead a quick way to adjust the overall color of your image. Blur and Sharpen To blur or sharpen your image you can use the “Blur” or “Sharpen” action. The blur action can be used to blur almost the entire image but there is also a “Gaussian” option that will make your image look more like a classic pencil sketch. The sharpen action will automatically sharpen all

Q: Connect to UWP game services using C# I'm trying to write a uwp application which connects to games services. So far I've tried the following code to connect: `var connectOptions = new ClientConnectionOptions() { ClientCertificateOptions = ClientCertificateOption.Manual, PublisherCertificateThumbprint = pubCert, ClientId = appId, Flow = "games", AppId = appId, AppPassword = "password", Scopes = GameServices.AuthenticationScopes.OfflineAccess, OfflineAccessRememberMe = true, WebProxy = new Uri("") }; var client = new GameServicesClient(connectOptions);` However this doesn't seem to work as I get an error saying `System.ArgumentException Value cannot be null. Parameter name: userId` When I add in the `appId` and `appPassword` the connection seems to work fine, `var connectOptions = new ClientConnectionOptions() { ClientCertificateOptions = ClientCertificateOption.Manual, PublisherCertificateThumbprint = pubCert, ClientId = appId, Flow = "games",`

Q: How to add values to a List from another List? I have two List and I have to add the values from List one to another List. Here is the sample code:- `class Class1 { private List myList1 = new List(); public List MyList2 { get; set; } public void AddList() { for (int i = 1; i < myList1.Count; i++) myList2.Add(myList1[i]); } };` So the instance is being created to the default, no-parameter constructor - that's why you can assign to the property `MyList2` and the assignment is not blowing up. If you change it to a `new()-` instead of a `new not-named-with-parameters` constructor, the program will throw. Note that if you made `MyList2` a `readonly` property instead of an `auto-property`, the compiler would have flagged the assignment here as well (and you would have not gotten it working). A: The problem is that you
